

State Licensing Platform (Confidential)

Digitizing public sector workflows through scalable product design

Snapshot:

Role: Product + Front-End Engineering

Timeline: 12 weeks (2021)

Tools: Salesforce LWC, HTML, CSS, JS

Problem:

Legacy workflows were manual, fragmented, and inefficient, causing delays and poor UX.

Goal:

Build a centralized licensing portal to streamline workflows and improve usability.

Product Thinking:

Standardized workflows, modular design, and ensured scalability with design system compliance.

Execution:

Requirements gathering, UX redesign, UI development using LWC, maintaining system compatibility.

Impact:

Reduced friction, improved usability, enabled scalable digital services.

Reflection:

Improved ability to translate ambiguity into structured product solutions.

Movie Recommendation System

Building a data-driven recommendation engine using collaborative filtering

Snapshot:

Role: Product + Data Modeling

Timeline: 4 weeks (2018)

Tools: Python, Scikit-learn

Problem:

Users struggled to discover relevant content due to lack of personalization.

Goal:

Develop a system to provide personalized recommendations.

Product Thinking:

Focused on user preference modeling and clustering.

Execution:

Analyzed datasets, applied collaborative filtering, implemented K-means clustering.

Impact:

Improved recommendation relevance and user experience.

Reflection:

Built foundation in data-driven decision making.

Grocery Management System

Designing a real-time ordering and inventory platform

Snapshot:

Role: Product + Full Stack Development

Timeline: 6 weeks (2016)

Tools: PHP, MySQL

Problem:

No seamless way to browse and order groceries with real-time availability.

Goal:

Build a web platform for real-time ordering and inventory tracking.

Product Thinking:

Focused on usability, accuracy, and structured navigation.

Execution:

Developed frontend and backend systems with real-time data handling.

Impact:

Improved ordering efficiency and user experience.

Reflection:

Learned fundamentals of end-to-end product development.

Closing Statement

Across these projects, I operate at the intersection of product thinking, UX design, and technical execution.

I aim to build products that simplify complexity and drive meaningful user impact.
