

Learn & Play

Reducing overwhelm in early career decisions through play, AI, and human-centered learning

1. The Problem

Today's young professionals are overwhelmed by too many choices, unstructured information, inefficient networking, and disconnected learning experiences.

More choice has not led to better decisions — it has led to decision paralysis.

2. Research

Objective: Explore how young adults (18–25) learn and make decisions.

Methods: Interviews, surveys, social analysis, literature review.

Key Questions:

- Do users feel overwhelmed by choices?
- How do they learn life skills?
- What makes learning engaging?

3. Personas

Overwhelmed Explorer (21): Consumes content but lacks clarity.

Career Builder (24): Wants to optimize decisions but struggles with tradeoffs.

4. Key Insights

Users don't lack information — they lack structured direction.

Learning is more effective when it feels like play.

Networking is high effort and low return.

5. Ideation

Learn: Roleplaying, simulations

Network: AI matching, mentorship

Decide: Aggregators, AI suggestions

6. Solution

Learn & Play: A gamified AI platform to explore careers, practice decisions, and build networks.

7. Core Features

Learn: Simulations

Plan: Financial tools

Network: Smart connections

Decide: Career pathways

8. User Journey

Goal → AI Path → Simulation → Networking → Decision

9. Impact

Functional: Saves time

Emotional: Builds confidence

Social: Stronger networks

10. Reflection

Learned to design for behavior, not just features. Future scope: deeper personalization and real-world data.
